

# SYNTAX ANALYSIS OR PARSING

Lecture 05

# FOLLOW SETS

- FOLLOW(A) is the set of terminals (including end marker of input - \$) that may follow non-terminal A in some sentential form.
- $\text{FOLLOW}(A) = \{c \mid S \Rightarrow^+ \dots Ac\dots\} \cup \{\$\}$  if  $S \Rightarrow^+ \dots A$
- For example, consider  $L \Rightarrow^+ (())(L)L$   
Both ')' and end of file can follow L
- NOTE:  $\varepsilon$  is *never* in FOLLOW sets

# COMPUTING FOLLOW(A)

1. If A is start symbol, put \$ in FOLLOW(A)
2. Productions of the form  $B \rightarrow \alpha A \beta$ ,  
Add  $\text{FIRST}(\beta) - \{\epsilon\}$  to FOLLOW(A)
3. Productions of the form  $B \rightarrow \alpha A$  or  
 $B \rightarrow \alpha A \beta$  where  $\beta \Rightarrow^* \epsilon$   
Add FOLLOW(B) to FOLLOW(A)

# EXAMPLE

- $E \rightarrow T E'$
- $E' \rightarrow + T E' \mid \varepsilon$
- $T \rightarrow F T'$
- $T' \rightarrow * F T' \mid \varepsilon$
- $F \rightarrow ( E ) \mid \text{id}$

- $\text{FIRST}(E) = \{ (, \text{id} \}$
- $\text{FIRST}(E') = \{ +, \varepsilon \}$
- $\text{FIRST}(T) = \{ (, \text{id} \}$
- $\text{FIRST}(T') = \{ *, \varepsilon \}$
- $\text{FIRST}(F) = \{ (, \text{id} \}$

- $\text{FOLLOW}(E) = \{ \$ \}$
- $\text{FOLLOW}(E') =$
- $\text{FOLLOW}(T) =$
- $\text{FOLLOW}(T') =$
- $\text{FOLLOW}(F) =$

Using rule #1

1. If A is start symbol, put \$ in FOLLOW(A)

Assume the first non-terminal is the start symbol

# EXAMPLE

- $E \rightarrow T E'$
  - $E' \rightarrow + T E' \mid \varepsilon$
  - $T \rightarrow F T'$
  - $T' \rightarrow * F T' \mid \varepsilon$
  - $F \rightarrow ( E ) \mid \text{id}$
- 
- $\text{FIRST}(E) = \{ (, \text{id} \}$
  - $\text{FIRST}(E') = \{ +, \varepsilon \}$
  - $\text{FIRST}(T) = \{ (, \text{id} \}$
  - $\text{FIRST}(T') = \{ *, \varepsilon \}$
  - $\text{FIRST}(F) = \{ (, \text{id} \}$
- 
- $\text{FOLLOW}(E) = \{ \$, ) \}$
  - $\text{FOLLOW}(E') =$
  - $\text{FOLLOW}(T) = \{ + \}$
  - $\text{FOLLOW}(T') =$
  - $\text{FOLLOW}(F) = \{ * \}$

Using rule #2

2. Productions of the form  $B \rightarrow \alpha A \beta$ ,  
Add  $\text{FIRST}(\beta) - \{\varepsilon\}$  to  $\text{FOLLOW}(A)$

# EXAMPLE

- $E \rightarrow T E'$
- $E' \rightarrow + T E' \mid \varepsilon$
- $T \rightarrow F T'$
- $T' \rightarrow * F T' \mid \varepsilon$
- $F \rightarrow ( E ) \mid \text{id}$
  
- $\text{FIRST}(E) = \{ (, \text{id} \}$
- $\text{FIRST}(E') = \{ +, \varepsilon \}$
- $\text{FIRST}(T) = \{ (, \text{id} \}$
- $\text{FIRST}(T') = \{ *, \varepsilon \}$
- $\text{FIRST}(F) = \{ (, \text{id} \}$

- $\text{FOLLOW}(E) = \{ \$, ) \}$
- $\text{FOLLOW}(E') = \text{FOLLOW}(E)$   
 $= \{ \$, ) \}$
- $\text{FOLLOW}(T) = \{ + \} \cup \text{FOLLOW}(E')$   
 $= \{ +, \$, ) \}$
- $\text{FOLLOW}(T') = \text{FOLLOW}(T)$   
 $= \{ +, \$, ) \}$
- $\text{FOLLOW}(F) = \{ * \} \cup \text{FOLLOW}(T')$   
 $= \{ *, +, \$, ) \}$

Using rule #3

3. Productions of the form  $B \rightarrow \alpha A$  or  
 $B \rightarrow \alpha A \beta$  where  $\beta \Rightarrow^* \varepsilon$   
Add  $\text{FOLLOW}(B)$  to  $\text{FOLLOW}(A)$

# EXAMPLE

- $S \rightarrow ( A ) \mid \varepsilon$
- $A \rightarrow T E$
- $E \rightarrow \& T E \mid \varepsilon$
- $T \rightarrow ( A ) \mid a \mid b \mid c$

- $\text{FIRST}(T) =$
- $\text{FIRST}(E) =$
- $\text{FIRST}(A) =$
- $\text{FIRST}(S) =$

- $\text{FOLLOW}(S) =$
- $\text{FOLLOW}(A) =$
- $\text{FOLLOW}(E) =$
- $\text{FOLLOW}(T) =$

# EXAMPLE

- $S \rightarrow ( A ) \mid \varepsilon$
  - $A \rightarrow T E$
  - $E \rightarrow \& T E \mid \varepsilon$
  - $T \rightarrow ( A ) \mid a \mid b \mid c$
- 
- $\text{FIRST}(T) = \{ (, a, b, c \}$
  - $\text{FIRST}(E) = \{ \&, \varepsilon \}$
  - $\text{FIRST}(A) = \{ (, a, b, c \}$
  - $\text{FIRST}(S) = \{ (, \varepsilon \}$
- 
- $\text{FOLLOW}(S) = \{ \$ \}$
  - $\text{FOLLOW}(A) = \{ ) \}$
  - $\text{FOLLOW}(E) = \text{FOLLOW}(A) = \{ ) \}$
  - $\text{FOLLOW}(T) = \text{FIRST}(E) \cup \text{FOLLOW}(E) = \{ \&, ) \}$

## EXAMPLE

- $S \rightarrow a S e \mid B$
- $B \rightarrow b B C f \mid C$
- $C \rightarrow c C g \mid d \mid \varepsilon$
- $\text{FOLLOW}(C) =$
- $\text{FOLLOW}(B) =$
- $\text{FIRST}(C) =$
- $\text{FIRST}(B) =$
- $\text{FIRST}(S) =$
- $\text{FOLLOW}(S) = \{\$ \}$

Assume the first non-terminal is the start symbol

1. If  $A$  is start symbol, put  $\$$  in  $\text{FOLLOW}(A)$
2. Productions of the form  $B \rightarrow \alpha A \beta$ ,  
Add  $\text{FIRST}(\beta) - \{\varepsilon\}$  to  $\text{FOLLOW}(A)$
3. Productions of the form  $B \rightarrow \alpha A$  or  
 $B \rightarrow \alpha A \beta$  where  $\beta \Rightarrow^* \varepsilon$   
Add  $\text{FOLLOW}(B)$  to  $\text{FOLLOW}(A)$

# EXAMPLE

- $S \rightarrow a S e \mid \underline{B}$
- $B \rightarrow b B C f \mid \underline{C}$
- $C \rightarrow c C g \mid d \mid \varepsilon$

- $\text{FIRST}(C) = \{c, d, \varepsilon\}$
- $\text{FIRST}(B) = \{b, c, d, \varepsilon\}$
- $\text{FIRST}(S) = \{a, b, c, d, \varepsilon\}$

- $\text{FOLLOW}(C) =$   
 $\{f, g\} \cup \text{FOLLOW}(B)$   
 $= \{c, d, e, f, g, \$\}$
- $\text{FOLLOW}(B) =$   
 $\{c, d, f\} \cup \text{FOLLOW}(S)$   
 $= \{c, d, e, \$, f\}$
- $\text{FOLLOW}(S) = \{ \$, e \}$

# FOLLOW EXAMPLE

- $S \rightarrow a S e \mid B$
- $B \rightarrow b B C f \mid C$
- $C \rightarrow c C g \mid d \mid \varepsilon$
- $\text{FOLLOW}(C) =$
- $\text{FOLLOW}(B) =$
- $\text{FIRST}(C) =$
- $\text{FIRST}(B) =$
- $\text{FIRST}(S) =$
- $\text{FOLLOW}(S) = \{\$ \}$

Assume the first non-terminal is the start symbol

1. If  $A$  is start symbol, put  $\$$  in  $\text{FOLLOW}(A)$
2. Productions of the form  $B \rightarrow \alpha A \beta$ ,  
Add  $\text{FIRST}(\beta) - \{\varepsilon\}$  to  $\text{FOLLOW}(A)$
3. Productions of the form  $B \rightarrow \alpha A$  or  
 $B \rightarrow \alpha A \beta$  where  $\beta \Rightarrow^* \varepsilon$   
Add  $\text{FOLLOW}(B)$  to  $\text{FOLLOW}(A)$

## EXAMPLE

- $S \rightarrow a S e \mid \underline{B}$
- $B \rightarrow b B C f \mid \underline{C}$
- $C \rightarrow c C g \mid d \mid \varepsilon$
- $\text{FIRST}(C) = \{c, d, \varepsilon\}$
- $\text{FIRST}(B) = \{b, c, d, \varepsilon\}$
- $\text{FIRST}(S) = \{a, b, c, d, \varepsilon\}$
- $\text{FOLLOW}(C) = \{f, g\} \cup \text{FOLLOW}(B) = \{c, d, e, f, g, \$\}$
- $\text{FOLLOW}(B) = \{c, d, f\} \cup \text{FOLLOW}(S) = \{c, d, e, \$, f\}$
- $\text{FOLLOW}(S) = \{ \$, e \}$

# PREDICTIVE PARSING

## ○ LL(1) Grammars

- Can do predictive parsing
- Can select the right rule
- Looking at only the next 1 input symbol
  - First L : Left to Right Scanning
  - Second L: Leftmost derivation
  - 1 : one input symbol look-ahead for predictive decision

## ○ LL(k) Grammars

- Can do predictive parsing
- Can select the right rule
- Looking at only the next k input symbols

## ○ Techniques to modify the grammar:

- Left Factoring
- Removal of Left Recursion

## ○ LL(k) Language

- Can be described with an LL(k) grammar

# TABLE DRIVEN PREDICTIVE PARSING

Assume that the grammar is LL(1)

i.e., Backtracking will never be needed

Always know which righthand side to choose (with one look-ahead)

- No Left Recursion
- Grammar is Left-Factored.

## Example

$E \rightarrow T E'$

$E' \rightarrow + T E' \mid \epsilon$

$T \rightarrow F T'$

$T' \rightarrow * F T' \mid \epsilon$

$F \rightarrow ( E ) \mid \underline{id}$

Term ...

+Term +Term + ... +Term

Factor ...

\* Factor \* Factor \* ... \* Factor

Step 1: From grammar, construct table.

Step 2: Use table to parse strings.

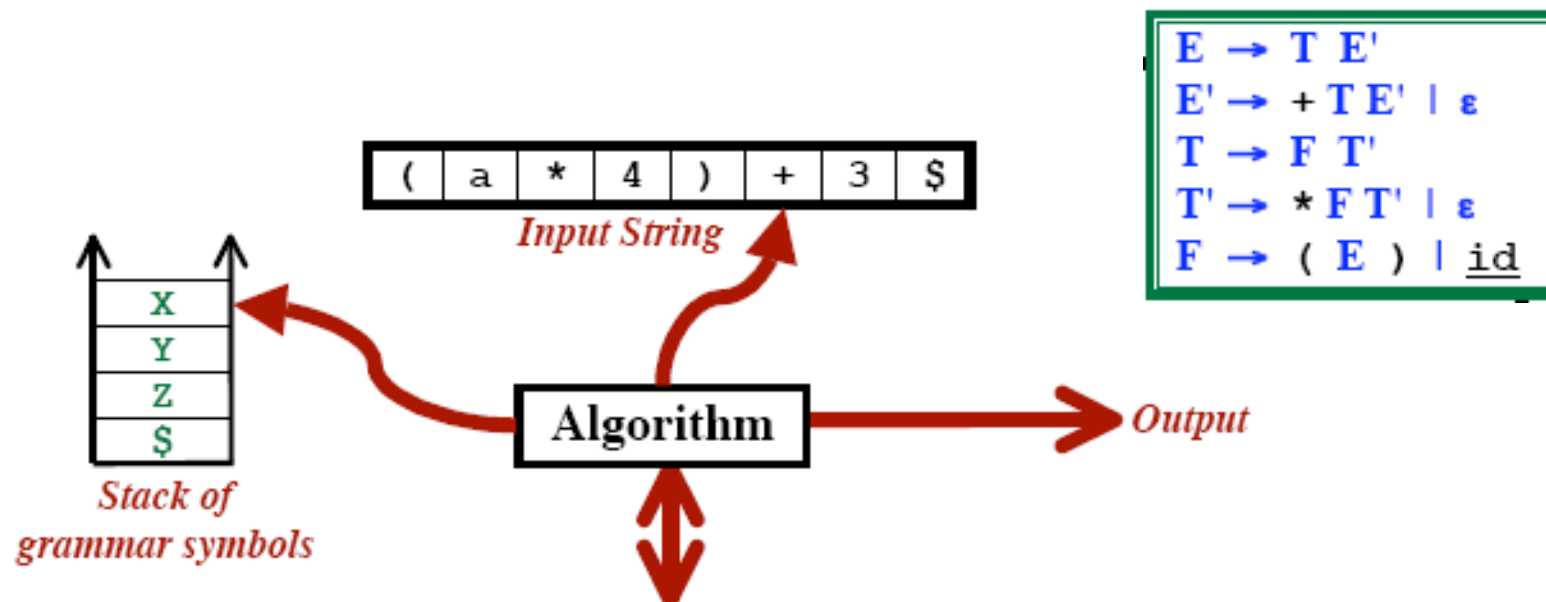

# PARSE TABLE CONSTRUCTION

**$M[A,a]$  refers to table entry at row non-terminal  $A$  and column terminal  $a$ .**

**For each production  $A \rightarrow \alpha$  do**

- 1. For each terminal  $a$  in  $\text{first}(\alpha)$  Add  $A \rightarrow \alpha$  to  $M[A,a]$**
- 2. if  $\epsilon$  in  $\text{first}(\alpha)$  add Add  $A \rightarrow \alpha$  to  $M[A,b]$  for each terminal  $b$  in  $\text{follow}(A)$**
- 3. if  $\epsilon$  in  $\text{first}(\alpha)$  and  $\$$  in  $\text{follow}(A)$ , Add  $A \rightarrow \alpha$  to  $M[A,\$]$**
- 4. Set each undefined entry of  $M$  to error**

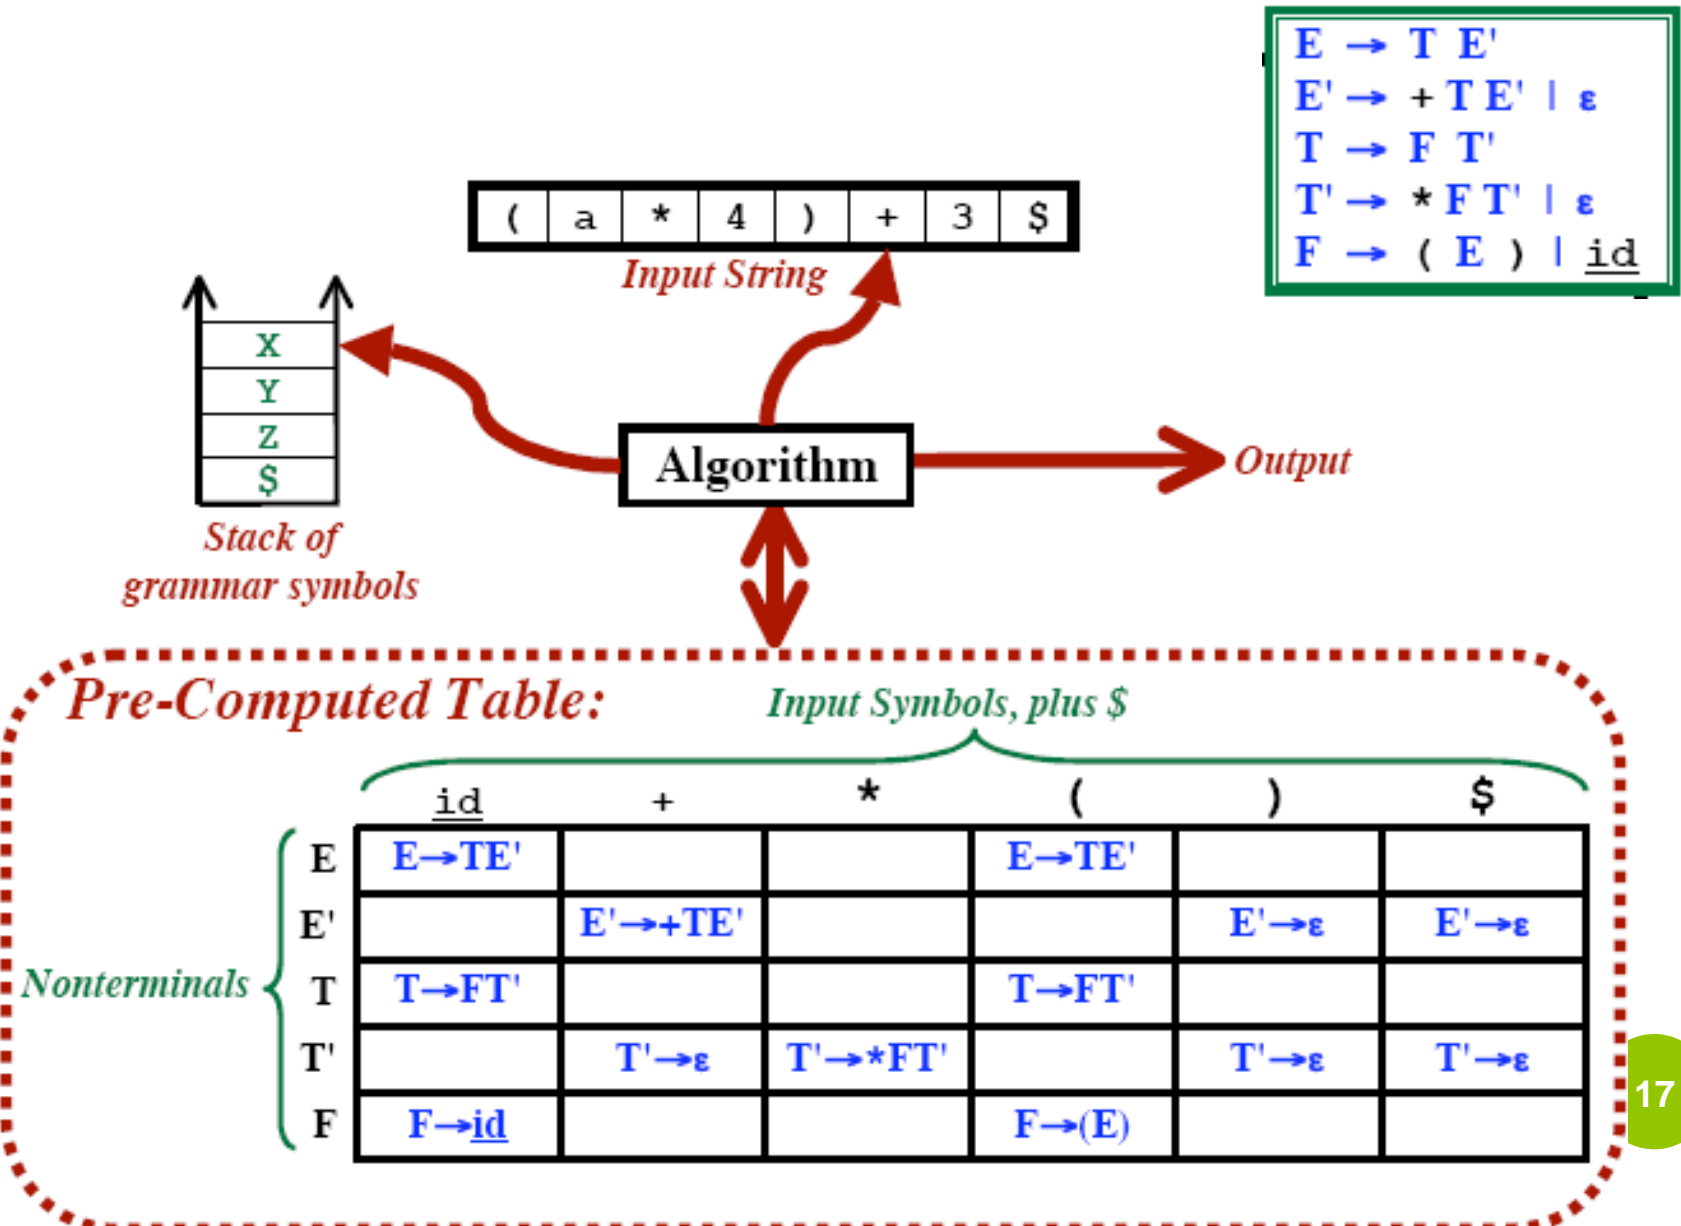

# TABLE DRIVEN PREDICTIVE PARSING

*Pre-Computed Table:*

# TABLE DRIVEN PREDICTIVE PARSING

# PREDICTIVE PARSING ALGORITHM

Set input ptr to first symbol; Place \$ after last input symbol

Push \$

Push S

repeat

  X = stack top

  a = current input symbol

if X is a terminal or X = \$ then

if X == a then

      Pop stack

      Advance input ptr

else

      Error

endIf

elseIf Table[X,a] contains a rule then   // call it  $X \rightarrow Y_1 Y_2 \dots Y_K$

    Pop stack

    Push  $Y_K$

    ...

    Push  $Y_2$

    Push  $Y_1$

    Print (" $X \rightarrow Y_1 Y_2 \dots Y_K$ ")

else   // Table[X,a] is blank

    Syntax Error

endIf

until X == \$

# LL(1) GRAMMAR

## ○ LL(1) grammars

- Are never ambiguous.
- Will never have left recursion.

## ○ *Furthermore...*

- If we are looking for an “A” and the next symbol is “b”,
  - Then only one production must be possible
- 
- Although elimination of left recursion and left factoring is easy.
    - Some grammar will never be a LL(1) grammar.

# LL(1) GRAMMAR

## A Grammar which is not LL(1)

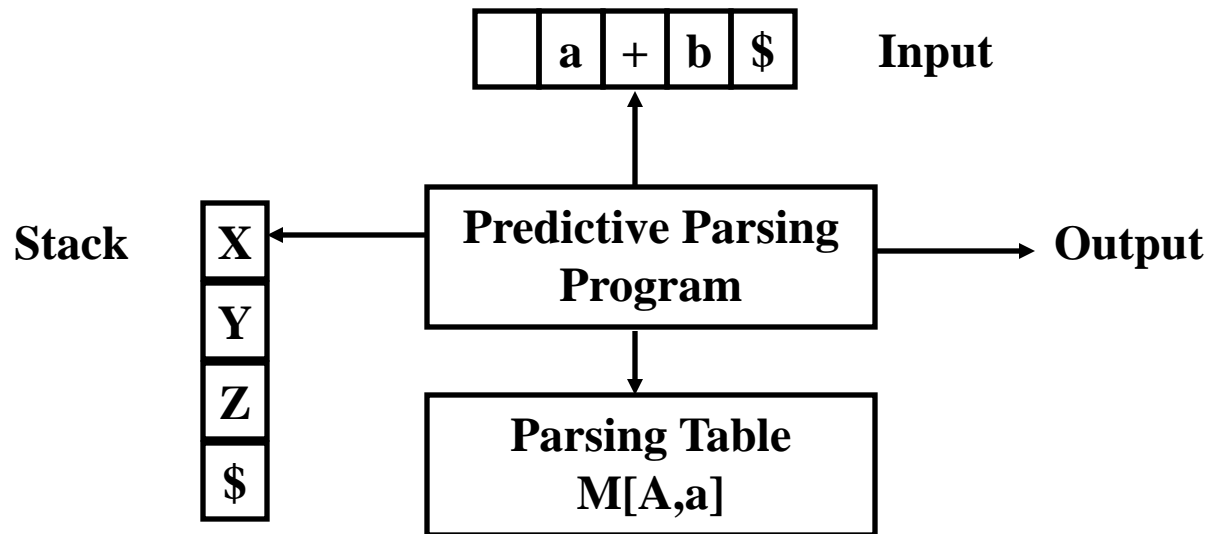

- What do we have to do if the resulting parsing table contains multiply defined entries?
  - If we didn't eliminate left recursion, eliminate the left recursion in the grammar.
  - If the grammar is not left factored, we have to left factor the grammar.
  - If its (new grammar's) parsing table still contains multiply defined entries, that grammar is ambiguous or it is inherently not a LL(1) grammar.
- A left recursive grammar cannot be a LL(1) grammar.
  - $A \rightarrow A\alpha \mid \beta$ 
    - ➔ any terminal that appears in  $\text{FIRST}(\beta)$  also appears in  $\text{FIRST}(A\alpha)$  because  $A\alpha \Rightarrow \beta\alpha$ .
    - ➔ If  $\beta$  is  $\epsilon$ , any terminal that appears in  $\text{FIRST}(\alpha)$  also appears in  $\text{FIRST}(A\alpha)$  and  $\text{FOLLOW}(A)$ .
- A grammar is not left factored, it cannot be a LL(1) grammar
  - $A \rightarrow \alpha\beta_1 \mid \alpha\beta_2$ 
    - ➔ any terminal that appears in  $\text{FIRST}(\alpha\beta_1)$  also appears in  $\text{FIRST}(\alpha\beta_2)$ .
- An ambiguous grammar cannot be a LL(1) grammar.

# PROPERTIES OF LL(1) GRAMMAR

- A grammar  $G$  is LL(1) if and only if whenever  $A \rightarrow \alpha \mid \beta$  are two distinct productions of  $G$  the following conditions hold:
  1. For no terminal  $a$  do both  $\alpha$  and  $\beta$  derive strings beginning with  $a$ .
  2. At most one of  $\alpha$  and  $\beta$  can derive the empty string.
  3. If then  $\beta \Rightarrow^* \varepsilon$ , then  $\alpha$  does not derive any string beginning with a terminal in  $\text{FOLLOW}(A)$ .

# ERROR RECOVERY

When Do Errors Occur? Recall Predictive Parser Function:

1. If  $X$  is a terminal and it doesn't match input.
2. If  $M[X, \text{Input}]$  is empty – No allowable actions

# ERROR RECOVERY

## Options

1. Skip over input symbols, until we can resume parsing  
Corresponds to ignoring tokens
2. Pop stack, until we can resume parsing  
Corresponds to inserting missing material
3. Some combination of 1 and 2
4. “Panic Mode” - Use Synchronizing tokens
  - Identify a set of synchronizing tokens.
  - Skip over tokens until we are positioned on a synchronizing token.
  - Pop stack until we can resume parsing.

# ERROR RECOVERY: SKIP INPUT SYMBOLS

## Example:

Decided to use rule

$S \rightarrow \text{IF } E \text{ THEN } S \text{ ELSE } S \text{ END}$

Stack tells us what we are expecting next in the input.

We've already gotten **IF** and **E**

Assume there are extra tokens in the input.

if (x<5) )) then y = 7; ...

*A syntax error occurs here.*

*We want to skip tokens until  
we can resume parsing.*

# ERROR RECOVERY: POP THE STACK

## Example:

Decided to use rules

$S \rightarrow \text{IF } E \text{ THEN } S \text{ ELSE } S \text{ END}$

$E \rightarrow ( E )$

We've already gotten `if ( E`

Assume there are missing tokens.

`if (x < 5 then y = 7; ...`

*A syntax error occurs here.*

*We want to pop the stack until  
we can resume parsing.*

# ERROR RECOVERY: PANIC MODE

The “*Synchronizing Set*” of tokens

... is determined by the compiler writer beforehand

Example: { SEMI-COLON, RIGHT-BRACE }

*Skip input symbols until we find something in the synchronizing set.*

## Idea:

Look at the non-terminal on the stack top.

Choose the synchronizing set based on this non-terminal.

Assume *A* is on the stack top

Let  $\text{SynchSet} = \text{FOLLOW}(A)$

Skip tokens until we see something in  $\text{FOLLOW}(A)$

Pop *A* from the stack.

Should be able to keep going.

## Idea:

Look at the non-terminals in the stack (e.g., *A*, *B*, *C*, ...)

Include  $\text{FIRST}(A)$ ,  $\text{FIRST}(B)$ ,  $\text{FIRST}(C)$ , ... in the SynchSet.

Skip tokens until we see something in  $\text{FIRST}(A)$ ,  $\text{FIRST}(B)$ ,  $\text{FIRST}(C)$ , ...

Pop stack until  $\text{NextToken} \in \text{FIRST}(\text{NonTerminalOnStackTop})$

# ERROR RECOVERY - TABLE ENTRIES

Each blank entry in the table indicates an error.

Tailor the error recovery for each possible error.

Fill the blank entry with an error routine.

The error routine will tell what to do.

Example:

	<u>id</u>	SEMI	RPAREN	LPAREN	...	\$
E			E4			
E'			E5			
...						

Choose the SynchSet  
based on the  
particular error

## Error-Handling Code

```
...
E4:
    SynchSet = { SEMI, IF, THEN }
    SkipTokensTo (SynchSet)
    Print ("Unexpected right paren")
    Pop stack
    break
E5:
    ...
...
```
